(54) Semiconductor device having an interconnecting circuit board and method for manufacturing same.

(57) A semiconductor device having an interconnecting circuit board comprises an island (20) formed in a predetermined plane, a semiconductor chip (21) disposed on the island (20) and having a plurality of electrically connecting electrode pads (22), an interconnecting circuit board (23) disposed on the semiconductor chip (20) and having an electrically conductive pattern (27), a plurality of inner leads (25) disposed around the island (20), a first electrically connecting wire (26c) connecting the electrically conductive pattern (27) and one (22b) of the plurality of electrically connecting electrode pads (22), and a second electrically connecting wire (26a, 26b) connecting the electrically conductive pattern (27) and one (25a) of the inner leads (25).

FIG. 2a

FIG. 2b
